

BACKED BY SCIENCE, PROVEN IN PRODUCTION

We share a common passion with growers: to cultivate stronger plants, lasting beauty, and real results. For more than a decade, that passion has been the driving force behind the Intrinsic brand fungicides — the first fungicide brand to be recognized by the EPA for plant health benefits.

It's why we always push the scientific envelope and our industry forward.

These products offer superior plant protection through a combination of broad-spectrum disease control and plant health benefits in the form of increased growth efficiency and increased tolerance to stress.

SUPERIOR

DISEASE CONTROL

Intrinsic brand fungicides inhibit mitochondrial respiration in fungi, preventing disease so your plants preserve energy and thrive while **controlling up to 40 of the toughest diseases with up to 28-day residual.**

INCREASED

GROWTH EFFICIENCY

Intrinsic brand fungicides maximize the photosynthetic process of plants, **helping greenhouse and nursery crops grow stronger and more resilient from the inside out compared to those treated with competitive products.**

ENHANCED

STRESS TOLERANCE

Plants treated with Intrinsic brand fungicides **grow dramatically longer, denser root systems than the competition,** improving rooting and resilience under environmental stresses like heat, cold, drought, and mechanical injury.

LET'S PUT DOWN ROOTS AND WATCH THEM GROW.
TOGETHER, WE'LL BE PIONEERS OF PLANT HEALTH.

BUILD A FOUNDATION OF PLANT HEALTH

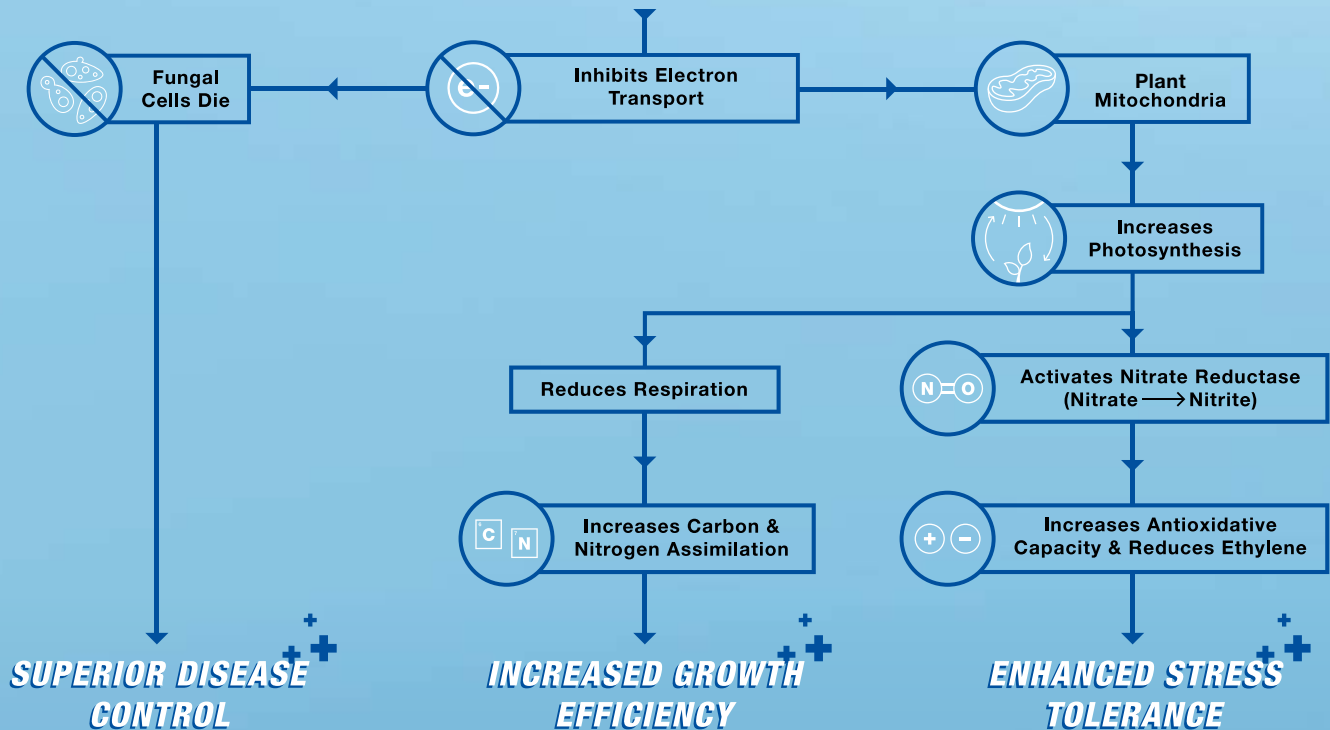

Intrinsic brand fungicides are powerful by design, delivering proven plant health benefits to help your plants achieve peak performance. See how it works:
